

HDD with UUID=bb5347b0-f19e-4f70-864a-e0cae093805c

Maybe purchased in 2020? Seagate Barracuda 2TB.

Contents

2025-03-02

lost+found/ holds files from Dropbox backup that was running from 2020 through maybe 2023? The Dropbox directory was corrupted or something, and lost+found is the dir where ext4 filesystems put recovered files. If I recall correctly, it holds very roughly 700GB of files, in many arbitrarily-named subdirs.

Used regex that lists the top level directories and their subdirectories, excluding hidden ones.

```
anthony@bluey:/media/home2TB$ find . -maxdepth 2 -type d | grep -v "\./\.\.*"
